

Data Backup & Recovery

We are a partner on your side

People tend to realize the value of what we have only after we lose it!

- How much would the loss of important files hurt your business?
- Would the cost of lost business be greater than a monthly backup subscription?

Our backup solutions starts at \$25/month

Acronis is a leader in backup solutions, scalable to large enterprises.

Your data is treated in a way that ensures its **safety, accessibility, privacy, authenticity and security.**

To ensure something gets done consistently, we set an automated schedule for backups - **Acronis doesn't forget!**

You can backup an entire system, or backup only specific folders.

Backups can be stored on a local disk or network appliance, in the cloud, or hybrid (in both places).

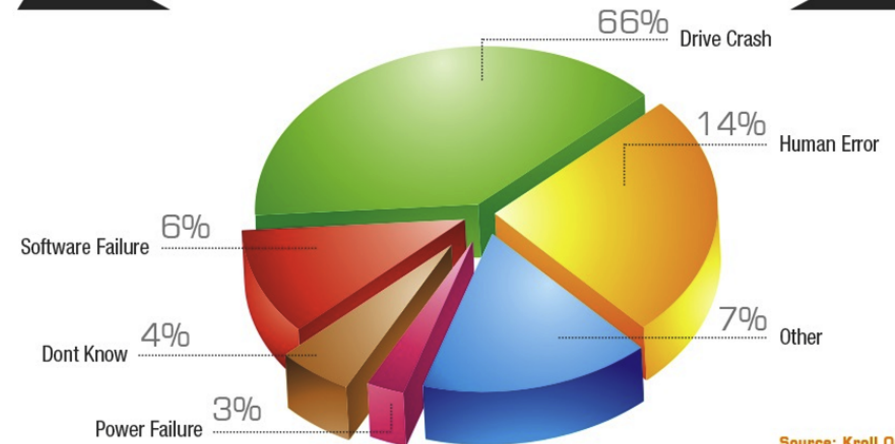

Email notifications keep administrators informed about the consistency of the backups.

Data can be easily retrieved through **multiple restore points.**

In case of **disaster recovery**, backup images can be loaded on cloud servers and your business can become operational within hours.

The software is easy to use with a professional set of features, requiring minimal training for your inhouse IT personnel.

THE MAIN CAUSES OF DATA LOSS

MAIN FEATURES

- Backups can run continuously or by a schedule
- For cloud hosted servers, AWS offers scheduled snapshots
- Data is encrypted from end to end
- Backup an entire system on a sector-by-sector level (bare-metal backups), or on a folder and file level
- Store backups locally or in the cloud
- Email notifications
- Multiple restore points available for data restores
- Load backup images to VM's on cloud servers for disaster recovery readiness
