

# Security - Network & Endpoint

Viruses, hackers, ransomware, spyware, the threats go on...

**IMPLEMENT FULL SCALE SECURITY SOLUTIONS**

## 1. Identity & Password Management:

- ★ Microsoft Azure AD with Multi-factor Authentication
- ★ Password Management Services

## 2. Network security:

- Secure gateway with advanced firewall
- Dual WAN connections
- DHCP & DNS server
- Multiple subnets segregating the network
- Advanced firewall with web content filtering
- VPN tunnels with encrypted traffic for remote access
- WIFI integration
- VOIP traffic isolation
- Web content filtering

## 4. Email protection from security and phishing attacks.

- Email content threat scanning
- Phishing attacks security

## 5. Security training for end users: Many security breaches are the result of social probes. We offer end user security education and support in the form of online classes, simulations, and periodical security newsletter.

## 6. Backup of email & business data:

- 😊 Regular automated backups with multiple restore points.
- 😊 Email archiving and retention.

<See Infocard 7: Data Backup & Recovery>

## 3. Endpoint security:

- Extended Endpoint Detection and Response (XDR & EDR) and Endpoint Protection (EPP) - computers and servers are secured through an advanced antivirus protection with AI threat detection, and a software firewall.
- Windows and software updates & patches are installed at an approved cycle.
- RMM agents monitor hardware performance and warn of potential computer & server failures.
- Full RMM and endpoint security.

😎 **The cost to protect is lower than the cost to recover!**  
**Get on a support plan for peace of mind 😎**
